

SuperXgen AI Startup Buildathon 2026

Beauty Salon Marketplace GlamBook Mumbai — Current State & Progress Report

Report Date: 29 May 2026 | **Project:** beauty-salon-marketplace | **Status:** Build passing — submission artifacts pending

SuperXgen AI Startup Buildathon 2026

Beauty Salon Marketplace — Current State & Progress Report

Project Name (Codebase): GlamBook Mumbai (`beauty-salon-marketplace`)
Repository Path: `C:\beauty-salon-marketplace`
Report Date: 29 May 2026
Build Status: Production build passes (`npm run build` — exit code 0)
Submission Readiness: Functional prototype complete; external deliverables (live URL, GitHub, video) pending

1. Target City & Niche

Attribute	Detail
Primary City	Mumbai, India
Configuration Source	`src/lib/config.ts` — `city: "Mumbai"`
Brand Positioning	GlamBook Mumbai — women-focused beauty & wellness marketplace
Tagline (Code)	<i>"Book beauty & wellness — made for women who deserve the best"</i>
Geographic Coverage (Seed Data)	Bandra West, Andheri East, Colaba, Juhu, Powai, Thane West
Service Niches Represented	Hair, skin/spa, nails, bridal (makeup/mehendi), men's grooming, home-service salons
Target User Persona	Urban women (primary), plus general Mumbai residents seeking salon discovery & booking
Hackathon Theme Alignment	Maps to "Mumbai Salon Marketplace" option from the official challenge brief

Strategic Niche Statement: A city-scoped, mobile-first salon discovery and booking platform with post-visit reviews, ride integration, and an AI-assisted search layer — positioned as a startup-style consumer product rather than a generic directory.

2. Tech Stack & Architecture

2.1 Technology Inventory

Layer	Technology	Version / Notes
Framework	Next.js (App Router)	16.2.6
UI Library	React	19.2.4
Language	TypeScript	5.x
Styling	Tailwind CSS	4.x (`@tailwindcss/postcss`)
Fonts	Geist Sans + Playfair Display	Google Fonts via `next/font`
Images	`next/image` + Unsplash remote URLs	Configured in `next.config.ts`
Linting	ESLint + `eslint-config-next`	9.x
Package Manager	npm	10.x

2.2 Explicitly Not Used (Despite Hackathon Suggestions)

Suggested Tool	Project Status
Firebase / Firestore	Not integrated
Separate REST API backend	Not present
MongoDB / PostgreSQL	Not present
Payment gateway (Razorpay, etc.)	Not integrated
LLM API (OpenAI, Claude API)	Not integrated at runtime
Lovable / Bolt / Replit	Not used in codebase

2.3 Architecture Overview

The application is a monolithic Next.js App Router project. All booking and review data persists in browser `localStorage`. Salon catalog is static seed data in `src/lib/salons.ts`. External integrations use deep links only (Google Maps, Uber, Ola, Rapido) and the browser Geolocation API.

Application Routes:

Route	Type	Purpose
-------	------	---------

`/`	Static	Landing, AI finder, salon explorer
`/salon/[id]`	Dynamic	Salon detail, booking, reviews, contact
`/booking/confirmed`	Dynamic (query params)	Post-booking confirmation
`/review/[bookingId]`	Client dynamic	Post-visit rating & feedback
`/my-bookings`	Static	Booking history & review prompts

2.4 Hosting & DevOps (Planned vs Actual)

Item	Status
Local development (`npm run dev`)	Verified working
Production build (`npm run build`)	Passing
Vercel deployment	Documented; not deployed
Public GitHub repository	URL not populated
CI/CD pipeline	None configured

3. AI Integration Workflow

3.1 Development-Time AI (Human-in-the-Loop)

Phase	Tool	Application
Project scaffolding	`create-next-app`	Initial Next.js + TypeScript + Tailwind boilerplate
Code generation & iteration	Cursor + Claude	Components, pages, booking, reviews, ride/map integration
Content authoring	ChatGPT (documented)	Salon names, addresses, service descriptions
Deployment planning	Vercel workflow	`SETUP_GUIDE.md`, `SUBMISSION.md`

3.2 Runtime AI Features (In-Product)

Feature	Implementation	File(s)
AI Smart Salon Finder	Keyword intent detection + weighted scoring	`src/lib/ai-recommend.ts`, `AiFinder.tsx`
Salon Owner Insights	Heuristic review analysis + suggestions	`src/lib/reviews.ts`, `SalonReviews.tsx`
Nearby Sorting	Haversine distance + geolocation	`src/lib/geo.ts`, `salon-sort.ts`

3.3 AI Innovation Assessment

Strengths: AI-augmented development velocity; offline-capable smart matcher; zero API cost at demo time.

Limitations: No live LLM API; matcher is heuristic not generative; insights are device-local only.

4. Completed Features (100% Working)

4.1 Core Marketplace

- Landing page with hero, stats, CTAs (GlamBook branding)
- 6 seeded Mumbai salons with images, ratings, tags, services
- Salon detail pages with services, pricing, amenities
- Search & filters: text, area, category, home-service
- Quick sort: Nearby, best rated, highly rated, low budget, premium, best services
- Geolocation for distance badges and nearby sorting

4.2 Booking System

- Appointment form with validation
- Booking persistence (`localStorage`, UUID)
- Confirmation page with review CTA
- My Bookings page with pending review prompts
- Homepage pending-review banner

4.3 Reviews & Feedback Loop

- Star rating (1–5) with conditional flows
- ≤ 3 stars: improvement feedback + issue tags
- 4–5 stars: appreciation feedback + love tags
- Thank-you screen on every submission
- Public reviews on salon pages
- Salon feedback dashboard (issues, appreciation, auto-suggestions)

4.4 Location & Mobility

- Google Maps view location and directions
- Book ride modal: Uber, Ola, Rapido with destination pre-fill
- Quick actions on cards: Map, Route, Ride, Call

4.5 Contact & Sharing

- Full contact panel: address, phone, email, website, hours
- Click-to-call, WhatsApp, Web Share API

4.6 Components (17 Total)

Header, Footer, SalonCard, SalonExplorer, QuickFilters, AiFinder, BookingForm, BookingConfirmedClient, ReviewFlow, StarRating, SalonReviews, SalonInfoPanel, SalonActions, BookRideModal, MyBookingsList, PendingReviewBanner

5. Work-In-Progress & Bugs

5.1 Critical Submission Gaps

Item	Status
Live website URL	Not deployed
Public GitHub repository	Not linked in docs
2–3 minute demo video	Not recorded

5.2 Architectural Limitations

- `localStorage` only — no cross-device sync
- Static seed data — no salon owner registration UI
- No user authentication
- No payment processing
- No SMS/email notifications

5.3 Known Functional Risks

- Ride deep links vary by OS/device
- Reviews lost if localStorage cleared or different browser
- Geolocation required for accurate nearby sort

5.4 Verified Working

- TypeScript compilation clean
- Production build successful
- All routes generate without error

6. UI/UX Assessment

6.1 Design Language

- **Colors:** Rose, fuchsia, pink gradients; cream background
- **Typography:** Playfair Display + Geist Sans
- **Style:** Rounded cards, pill buttons, soft shadows, emoji accents
- **Target:** Premium feminine beauty app for women

6.2 Responsiveness

- Mobile-first; 2-column tablet; 3-column desktop salon grid
- Sticky booking sidebar on salon detail (desktop)

6.3 Hackathon Criteria Estimate

Criterion	Band
Product Thinking	High
UI/UX Design	High
AI Usage & Innovation	Medium-High
Execution Quality	Medium
User Experience	High

7. Missing Core Requirements

7.1 Official Submission Deliverables

Requirement	Status
Live website link	Missing
GitHub repository	Unconfirmed
Demo video	Missing
AI workflow explanation	Written in SUBMISSION.md

7.2 Product Requirements

Requirement	Status
City-based marketplace	Complete
Salon listing	Complete
Booking system	Demo-complete
Modern UI	Complete
AI in build	Documented
AI in product	Partial (heuristic)

7.3 Recommended Priority Actions

- 1. Deploy to Vercel
- 2. Push public GitHub repo
- 3. Record demo video (AI finder → book → review → maps → ride → insights)
- 4. Update SUBMISSION.md script for new features

5. Optional: Firebase for persistence; more seed salons

Appendix A: Seed Salon Inventory

Salon	Area	Tier	Home Service
Glam Studio Bandra	Bandra West	Premium	No
Lotus Spa & Salon	Andheri East	Mid	Yes
Urban Groom Colaba	Colaba	Mid	No
Bridal Bliss Juhu	Juhu	Premium	Yes
Nail Bar Powai	Powai	Budget	No
Home Glam Thane	Thane West	Mid	Yes

Appendix B: localStorage Schema

Bookings (`msm\_bookings`): id, salonId, salonName, serviceId, serviceName, date, time, customerName, phone, price, createdAt, reviewed

Reviews (`msm\_reviews`): id, bookingId, salonId, salonName, customerName, rating, improveFeedback, appreciateFeedback, tags, createdAt

Report Classification: Mentor Review / Hackathon Submission

Codebase Version: 0.1.0

Prepared for: SuperXgen AI Startup Buildathon 2026
